

## Project 4: Image Restoration

The scoring method for this project is as follows:

1. Implement a blurring filter using the equation (5.6-11, 数字图像处理 (第三版)) in textbook, and blur the test image 'book\_cover.jpg' using parameters  $a=b=0.1$  and  $T=1$ . (20%)
2. Add Gaussian noise of 0 mean and variance of 500 to the blurred image. (10%)
3. Restore the blurred image and the blurred noisy image using the inverse filter. (30%)
4. Restore the blurred noisy image using the parametric Wiener filter with at least 3 different parameters, and compare and analyse results with that of 3. (40%)
